

My name is Eric Bahr and I am currently pursuing a Masters Degree in Electrical Engineering from Montana Tech. I have been working as an intern for the Materials Bureau since the start of the summer and have learned so much since then.

I am in the process of updating an older Hamburg Wheel Tracking Device to newer, faster controls and creating a new user interface for it. I have already become familiar with the ins and outs of this device, knowledgeable in three different program languages, and have made many beneficial modifications. I also received great experience in extensive troubleshooting, reviewing and purchasing parts, and dealing with various customer service representatives.

I have really enjoyed working on this project and with everyone I have worked with. Working for the Montana Department of Transportation has given me so much experience and some great hands-on work that school just can't provide. I am very grateful for this opportunity, and would recommend working at the DOT to anyone.
